Summary

Backend Software Engineer with 3 years of experience across healthcare, e-commerce, and IoT-based fleet management (vehicle tracking and telematics) domains. Specialized in building and maintaining scalable, data-intensive back-end systems. Proficient in JavaScript, Python, Node.js, Django, REST APIs, MySQL, PostgreSQL, and MongoDB. Strong problem-solving and analytical skills with a focus on delivering quality and reliable solutions.

Experience

Theta Technolabs

Trainee Software Engineer

January 2023 – May 2023

Ahmedabad, Gujarat, India

- Completed structured training in Angular and professional communication, building dynamic forms and reusable UI components with basic database integrations.
- Developed and tested modular frontend features, gaining hands-on experience in component-based architecture and API integration workflows.

DnT Infotech LLP

Software Engineer

May 2023 – June 2025

Ahmedabad, Gujarat, India

- Developed a FHIR-compliant healthcare platform digitizing medical workflows for senior care systems, improving structured data capture and healthcare record traceability.
- Designed and optimized RESTful backend services using Node.js, MongoDB, and PostgreSQL, improving API reliability, database performance, and secure healthcare data handling.
- Collaborated with frontend, QA, and product teams to translate business requirements into scalable technical solutions, ensuring on-time feature delivery and production stability.
- Mentored junior developers through code reviews and task planning, improving team productivity and maintaining code quality standards.

Fluvina Technologies

Software Engineer

June 2025 – Present

Ahmedabad, Gujarat, India

- Engineered high-frequency telemetry ingestion pipelines for real-time vehicle tracking, enabling live fleet monitoring and faster operational decision-making.
- Designed geofence-based alerting systems and role-based dashboards integrated with MapmyIndia, enhancing fleet visibility and access-controlled data management.
- Worked cross-functionally with mobile, QA, and project management teams to define API contracts, resolve production issues, and ensure reliable multi-platform feature releases.

Technical Skills

Programming Languages: Python, JavaScript, TypeScript
Backend Technologies: REST APIs, Django, Node.js, Express.js, WebSockets
Cloud Technologies: AWS Lambda
Databases: MySQL, PostgreSQL, MongoDB
Healthcare Tools: FHIR, Aidbox
Maps and Geospatial: MapmyIndia APIs
Version Control: Git, GitHub
Security: JWT Authentication, Role-Based Access Control (RBAC), Rate Limiting, Account Lockout, CSRF Protection, Input Validation

Education

Dharmsinh Desai Institute of Technology, Dharmsinh Desai University Bachelor of Technology in Computer Engineering, CPI 7.00 out of 10	August 2020 – May 2023 Nadiad, Gujarat, India
Dr. Subhash Technical Campus, Gujarat Technological University Diploma in Computer Engineering, CGPA 9.80 out of 10	August 2017 – May 2020 Junagadh, Gujarat, India

Projects

Vehicle Monitoring System | *Node.js, Express.js, Python, MySQL, PostgreSQL, EJS, MapmyIndia*

- Engineered scalable backend services and admin dashboards to manage vehicles, devices, drivers, and SIM cards, enabling real-time and historical fleet tracking with role-based access control.
- Integrated MapmyIndia for live location visualization and geofence-based alerts, applying secure authentication, rate limiting, CSRF protection, and VAPT-compliant API security practices.
- Designed high-frequency telemetry ingestion pipelines using Python and Node.js, implementing custom packet parsing and filtering to improve throughput and minimize data loss.
- Architected database systems with MySQL for relational metadata and partitioned PostgreSQL for time-series telemetry, reducing historical query latency by 40%.

Healthcare Application (FHIR-Compliant) | *Node.js, Express.js, Kafka, MongoDB*

- Developed a FHIR-compliant healthcare platform to digitize medical form workflows for senior care systems, reducing manual processes and improving structured data capture.
- Built a scalable Form Service using REST APIs to support dynamic form creation, external healthcare system integration, and interoperable data exchange using Aidbox.
- Implemented Kafka-based data ingestion pipelines and migrated legacy on-premise records to MongoDB, ensuring reliable healthcare data processing and storage.

PhysioDashboard | *Laravel, MySQL*

- Built a physiotherapy operations dashboard with scheduling logic and workload optimization algorithms.
- Implemented secure REST APIs with RBAC, CSRF protection, and encrypted session management.

Aviation Crew Management System | *Node.js, Express.js, React, MySQL*

- Designed and developed backend services for aviation crew management, implementing real-time synchronization with external airline systems and automating per-diem calculations based on duty schedules and business rules.
- Architected relational database schema in MySQL for crew records, scheduling data, and sync logs, optimizing query performance and ensuring reliable operational data processing.
